Context

Current state and Suggestion for improvement

Context: Current state

- Users can add a movie or TV series to their “Watch later” list, but they don't receive any reminders or notifications about saved content.
- Many users add content to their watchlist but then do not watch it, causing a decrease in engagement and time spent on the platform.

Context: Suggestion for improvement

- Automatically send a weekly email with a personalized reminder of the content saved to user's watchlist, highlighting any that have just been released or are due.
- This reminder can bring inactive users back to the platform, increase content consumption, and reduce the likelihood of churn.

Hypothesis

If we send a weekly reminder email to users who have content on their watchlist, then the percentage of content from that list actually consumed will increase, because the reminder reinforces memory and encourages action on the part of the user.

Change

A/B test description

Change: A/B test description

Control group (A)

No changes

- Users can still add videos to the watchlist, but they won't receive any email notifications

Test group (B)

Users receive a personalized weekly email with an updated list of watchlist items, highlighting:

- New releases
- Expiring content (end of promotions)
- Suggestions based on the saved list

Metrics

- Main metric
- Interest metrics
- Fuse metrics

Content view rate in the watchlist

Number of contents watched from watchlist /
Total number of contents in watchlist

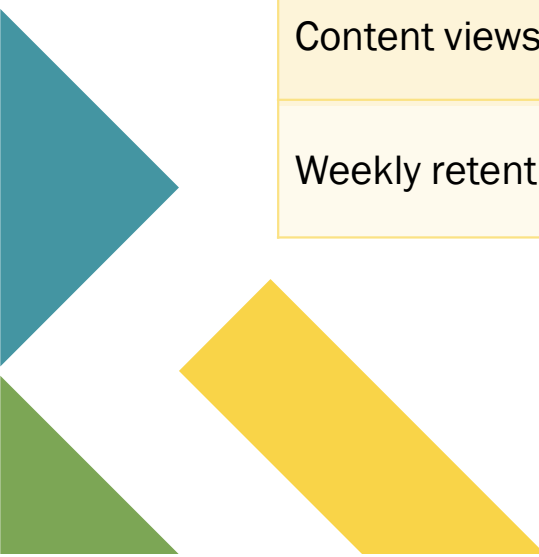

Main metric

1. Click-through rate (CTR) on the email
2. Average time spent on the platform per session
3. Number of sessions started within 48 hours of receiving the email
4. Average number of content views per user per week
5. Weekly retention rate

Interest metrics

Metric	Misure	Group A	Group B
<u>Content view rate in the watchlist</u>	%		
Click-through rate (CTR) on the email	%		
Average time spent on the platform per session	min		
Sessions started within 48 hours of receiving the email	Nr		
Content views per user per week	Nr / week		
Weekly retention rate	%		

Main & interest metrics

1. Email unsubscribe rate: monitoring the annoyance generated by emails
2. Email bounce rate: ensuring emails reach users correctly
3. Platform abandonment rate: verification that the reminder does not have a negative impact on overall behavior
4. Email spam reporting: control of the communication perception
5. Site performance and load times: ensure that increased email-driven traffic doesn't compromise user experience

Fuse metrics

Fuse metrics

Metric	Misure	Group A	Group B
Email unsubscribe rate	%		
Email bounce rate	%		
Platform abandonment rate	%		
Email spam reporting	%		
Site performance and load times	sec
